

Measuring for a Mirror Over a Single Vanity

- Measuring for the height: Measure from the top of the back splash to the lowest hanging part of your light fixture, which may be the globes. This is your maximum height for your mirror.
- Measuring for the width: The width of your vanity is your maximum width for your mirror. Your mirror should not hang past your vanity.
- For a well designed look, leave a little space around the mirror. We suggest a minimum of 1 inch.
